

IN THE SPECIFICATION

Please amend the specification as follows:

Delete the paragraph on page 3, between lines 13-15 of the specification.

Replace the paragraph on page 8, between lines 10-15 of the specification with the following:

Fig. 10 once more shows, on an enlarged scale, how a locking stud 20 is positioned on the surface of the housing 50. The stud 20 bears laterally on the stop 90. The lower rounded bulge 92 of the locking stud 20 was moved over the snap projection 94 during the rotation. After completion of the rotation against the stop 90, the axial force of the spring elements prevents the bulge 92 locked against the snap projection 94 from being moved back again.

Replace the paragraph on page 8, between lines 16-19 of the specification with the following:

In the position shown in Fig. 9, the spring element 42 forcibly retains the lamp base 14 of the lamp 10 within the opening 52 in transverse direction (not shown). The action of the spring element ~~52-42~~ in a given radial direction presses the lamp 10 against the wall of the opening 52 opposed to the spring element 42, so that an exact position is occupied.
